                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polya tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clone. However, there are artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcriptase errors that result in single base changes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AYU58359 1828 bp mRNA linear

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

This sequence encodes a human breast tumour protein immunogenic frayment of the invention. The polypeptides or nucleic acids encoding them are useful in vaccines and pharmaceutical compositions for manufacture of immedicaments for inhibiting the development of breast cancer in a patient. They can also be used to treat breast cancer. Antibodies against these polypeptides can be used to detect and monitor proyression of breast ancer, in patients. Primers and probes derived from the polynucleotides encoding the breast proteins are useful for detection of breast cancer. Peripheral blood cells from a patient incubated in the presence of at last one polypeptide, such that T cells proliferate, are useful in manufacture of a medicament for treating breast cancer in a patient. Antiyen presenting cells incubated in the presence of at least one polypeptide are also useful for treating breast cancer.
                                                                                                                                                                                                                                                                                                                                                      ttgtggtggagaatagtgcccagcgggtcatccacttggcgggtcagtgggagaacacc 120

The present sequence and isolated from a breast tumbur cond library. It is provided in a specification relating to compounds for immunotherapy and diagnosis of breast cancer. Breast tumbur antigens and the polynucleotides that encode them may be used in the production of a pharmaceutical composition to be used in the treatment of breast cancer. Proliferated T cells and incubated antigen presenting cells are also required. The polypeptides and polynucleotides may also be used to produce a vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

The proteins can have activities based on the Issues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic: antiasthmatic; antintheumatic; antiarthritic; antinflammatory; antithyroid; antiallergic; antibacterial; antiviral; dermatological; neuroprotective; cardiant; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic and antiangiogenic. The polynucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions.

                                                                                                                                                                                                                                                  The invention relates to a method for enhancing the secretion of beta-
lactam compounds from a micro-organism that comprises enhancing ABC
dadenosine triphosphate (ATP)-binding cassette) transporter activity of
the micro-organism. The method is used for enhancing the production and
secretions of beta-lactam antibiotics like penicillin and cephalosporins.
Manipulation of the ABC-transport protein system provides a means for
enhancing beta-lactam secretion. The present sequence represents or
partial cDNA sequence of the P. chrysogenum ABC transporter dd062.
                                                                                                                                                                                         Enhancing secretion of beta-lactam compounds from a micro-organism by enhancing adenosine triphosphate-binding cassette transporter activity, useful for producing e.g. penicillin and cephalosporins -
                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The invention relates to a method for enhancing the secretion of beta-
lactam compounds from a micro-organism that comprises enhancing ABC
dealorshine triphosphate (ATP)-binding cassette) transporter activity of
the micro-organism. The method is used for enhancing the production and
secretions of beta-lactam antibiotics like penicillin and cephalosporins.
Manipulation of the ABC-transport protein system provides a means for
enhancing beta-lactam secretion. The present sequence represents the
CDNA sequence of the P. chrysogenum ABC transporter dd062.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Enhancing secretion of beta-lactam compounds from a micro-organism by enhancing adenosine triphosphate-binding cassette transporter activity, useful for producing e.g. penicillin and cephalosporins

                                                                                                                                                                                               polynucleotide sequences AAC79348-C79375 encode plant viral movement proteins AAB4494-B4450. Some plant viruses have been shown to be able to establish systemic infections via movement proteins that utilise existing plant pathways to traffic macromolecules to surrounding cells. Proteins such as those of the invention are similar to viral movement proteins that function in the transport of nucleic acids from cell to proteins that function in the transport of nucleic acids from cell to cell. The plant viral movement proteins are useful for obtaining a nucleic acid fragment encoding a viral movement protein. Polynucleotides election of a transformed cell. The proteins are useful in the field of plant wiral movement proteins are useful in the field of proteins. The proteins are useful in the field of proteins are also useful for isolating conday homologous proteins from the same or other plant species, and to create transgenic plants in which the protein is presented at higher or lower levels than normal viral coll types or developmental stages in which they are not normally found. The proteins and nucleotide sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Transmembrane domain; human; nutrition; cytokine; cell proliferation; differentiation; immune system; stimulator; suppressor; regulator; heamatopoiesis; activin; inhibitor; chemotactic; chemokinetic; receptor; haemostatic; thrombolytic; ligand, anti-inflammatory; tumour; ds.

The products of the invention have antitumor activity. Folypeptides (I) encoded by (A) are used: (i) for the intitumor activity. Folypeptides (I) encoded by (A) are used: (i) for therapy of prostate cancer, optionally where expressed by gene therapy methods. (A) is also used to isolate full-length genes (for gene therapy and for recombinant production of (I). Which can be used to raise specific antibodies. (A) are identified by assembly of ESTS (expressed sequence tays) before they are analyzed for expression pattern (tissue
                                                                                                                                        AAV49550-V49599 are cDNA sequences which encode Luman proteins containing
                                                                                                                                                                                                                                                haematopoiesis regulating, tissue growth, activin/inhibin, chemotactic/chemokinatic, haemostatic and thrombolytic, receptor/ligand, anti-inflammatory or tumour inhibition activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid expressed at high level in prostatic tumor tissue and encoded polypeptides, useful for treating cancer and screening for therapeutic agents ^{\circ}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Rosenthal A;
                                                                                                                                                                 a transmembrane domain. These proteins can be used for, e.g. research and nutrition, and may have cytokine and cell proliferation/differentiation, immune stimulating/suppressing,

The enzyme has aspartate-semialdehyde dehydrogenase activity and can be used for growing amino acid-producing microbes. The present sequence encodes an enzyme of the invention.
                                                                                                      Gaps
specificity). This approach eliminates many of the false results, a regards tissue specificity, associated with known methods that use single (usually short) ESTs. AA233423-233476 represent expressed sequence tags described in the method of the invention.

The present sequence encodes human glutamate-binding protein (HGLUBP).

The protein has structural homology to the rat glutamate-binding subunit for the N-methyl-D-asparatete receptor. The nucleic acid encoding HGLUBP as first identified in Insyte clone 386116 from a thymus cDNA library.

HGLUBP is useful for treatment, prevention and diagnosis of central stagnal stagnal in the require an increase or reduction in signal ling through glutamate, e.g. ischaemia, hypoglycaemia, epllepsy, supral ling through glutamate, e.g. ischaemia, hypoglycaemia, epllepsy, such as Alzhahimer's, imunington's, Creutzfeldla-Jakob or Parkinson's diseases, amyotrophic lateral sclerosis or lathyrism, pain, defective motor rhythm, vasomotor tone, baroreception and long-term potentiation, muscale relaxation and sedation. Antibodies can also be used to target plarmaceuticals to HGLUBP expression and to monitor treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ٠.

                                                                                                                                                                                                                                                                                                                                                                                                                                  AAV19550-V49599 are CDNA sequences which encode numan proteins containing a transmembrane domain. These proteins can be used for, e.g. research and nutrition, and may have cytokine and cell proliferation/differentiation, immune stimulating/suppressing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human secreted protein-encoding gene 7 cDNA clone HOHEP82, SEQ ID NO:17.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fily, sea urchin and tomator These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Transmembrane domain; human; nutrition; cytokine; cell proliferation; differentiation; immune system; stimulator; suppressor; regulator; heamatopoiesis; activin; inhibitor; chemotactic; chemokinetic; receptor; haemostatic; thrombolytic; ligand; anti-inflammatory; tumour; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              XXXXXXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAD05220-AAD05282 represent cDNAs corresponding to 21 human secreted protein genes, and AAE0135-AAE01413 represent the protein they encode. protein genes, and AAE0135-AAE01415 represent the protein frequency or variants. The secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. CC or ameliorating medical conditions, e.g., by protein or gene therapy. CC the new genes. Specific uses are described for each of the 21 genes, the new genes. Specific uses are described for each of the 21 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, diseases of the immune system, AIDS, autoimmune constraints of alsorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders, diseases of the immune system, AIDS, autoimmune constraints and sorders, schrzophrenia, skin disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders, diabetes, atherosclerois, cardiovascular disorders, anglogenic disorders, atherosclerois, cardiovascular disorders, anglogenic disorders, and constraints, and can be used to aid wound healing and epithelial cell corresponders and in chemotrakis, and can be used as a food additive or proteins can also be used to aid wound healing and epithelial cell corresponders and in chemotrakis, and can be used as a food additive or proteins can also be used to aid wound healing and epithelial cell corresponders and in chemotrakis, and can be used as a food additive or proteins can also be used and an ease as a food additive or or protein of the invention can be used in alleviating symptoms associated corresponders mentioned above, and in diagnostic immunoassay e.g., with the disorders and bove, and in diagnostic immunoassay e.g., adicidentive immunoassay or enzyme inhead above, and in diagnostic immunoassay or enzyme inheads.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             present sequence represents a human secreted protein encoding CDNA of

The nucleotide and deduced as sequences of human transducin-like enhancer of split proceins TLE-1 (AAQ62175, AAR51476), TLE-2 (AAQ62176, AAR51477), TLE-3 (AAQ62177, AAR51478) and TLE-4 (AAQ62178, AAR51479) that of Drosophila E(spl)ms/10 protein (AAR51481). Comparison of the WD-40 domains of these proteins defined the consensus residues shown in AR81480. The action of the proteins were compared with those of the SV40 T actions in the proteins were compared with those of the SV40 T actions properly human p53, human A-myb and dorsal proteins with respect to nuclear localization sites (sequences AAR51482-56). TLE can be used to treat or diagnose (pre) neoplastic conditions, or to study cell differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The invention provides vertebrate (human) protein homologue of a UNC-53 protein of Caenorhabdils elegans. The UNC-53 binds to microtubules or their plus ends. The UNC-53 sequences are used to promote neural creaming regeneration. The UNC-53 sequences are used to promote neural creaming regeneration. The UNC-53 sequences are used to promote neural creaming diseases (e.g. rheumatoid arthritis and sclerosis). The UNC-53 autoimmune diseases (e.g. rheumatoid arthritis and sclerosis). The UNC-53 autoimmune diseases (e.g. rheumatoid arthritis and sclerosis). The UNC-53 as a source of probes for detecting allelic variants and polymorphisms, for sequencing genomic DNA and for detecting UNC-53 expression; and as source of therapeutic antisense sequences. Cells that express the protein are used to identify regulators of cells that express the concern of the protein and as source of therapeutic antisense sequences. Cells that expression; and as source of therapeutic antisense sequences. Cells that expression and as concern of the capeutoid transduction pathways also involving UNC-53, and to involved in signal transduction pathways also involving UNC-53, and to involved in signal transduction pathways also involving UNC-53, and to target gene to a cellular microtubule or its plus ends. The present the target gene to a cellular microtubule or its plus ends. The present coll unc-63 deservants in involved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                   /*tay* c
/note= "this region is found to be absent in a
variant cDNA isolated from frontal cortex:
Absence of this fragment results in an out-of-
irame deletion of 101 basepairs, resulting in
premature stop in translation*
                                 a "this region can be replaced with one of the three sequences shown in AAAO7837 to AAAO7839; this provides three variants for the 5' end of the gene"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

```
The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequence tag; secreted protein; cDNA isolation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              human secreted proteins, and encode the proteins given in AXV0602 and human secreted proteins, and encode the proteins given in AXV0602 and AXV11994 to AXV1200, respectively. The proteins given in AXV01602 and AXV11994 to AXV1200, respectively. The proteins given in AXV01602 and aXV11994 to AXV1200, respectively. The protein given represent the signal peptide and an N-terminal fragment of a secreted human gene nucleic acid sequences can be used for producing secreted human gene products. They can also be used for producing secreted human gene therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, haematopoiesis regulating activity, receptor/ligand activity, haemostatic and regulating activity, receptor/ligand activity, anti-inflammatory thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    o;

                                                                                                                                                                                                                                                                                                      The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different Lissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed CDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; open reading frame; ORFX; detection; cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; anticonvulsant; osteopathic; antiarthritic; immunosuppressant; cardiant; immunostimulant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antiviral; antibacterial; antifungal; antirheumatic; antithyroid; antianaemic; gene therapy; cancer; prolliferative disorder; hypertension; neurodegenerative disorder; osteoarthritis; graft vs host disease; cardiovascular disease; diabetes mellitus; hypothyroidism; SIDE; AIDS;

canalysis to many the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antiposofiatic antiporakinsonian; nootropic; neuroprotective; catiopathic; anticonvulsant; antiarthritic; immunosuppressant; cateopathic; anticonvulsant; thrombolytic; coagulant; vasotropic; antidabetic; hypotensive; dermatological; immunosuppressive; antidabetic; hypotensive; dermatological; antiviral; antiviral; antitingal; antithenatic; antithyroid; and antianeamic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy; proliferative disorders, neurodegenerative disorders, osteoarthritis, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, chypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune and cartilage damage, nocturnal hæmoglobinuria, antiinflammatory disease; to enhance combined immunodesis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Leek; glossy8 homologue; gl8; cuticle; cuticular lipid biosynthesis;

                                                                                                                                                                                                                                                                                          The invention relates to transforming a plant cell with either a nucleic acid encoding a plant cuticular lipid biosynthetic protein, or an acid encoding a plant cuticular lipid biosynthetic protein, or an anticase mucleic acid sequence targetted to a plant cuticular lipid cantisense nucleic acid sequence targetted to a plant cuticular lipid genes that may be used in the invention are given in a CAASTSA1-A5784 and AAAST81. The cuticie consists of a meshwork (cutin) of cross-seterified polymerised hydroxy fatty acids embedded in a complex mixture of nonpolar lipids (the cuticular wax). The cuticular process and filters UV radiation. Mutations in the cuticular lipid genes affects the quantity and composition of cuticular lipids; in maize, 17 cloci (the glossy (gl) genes) have been identified as being in involved in cuticular lipid blossynthesis or control. The method is useful for cuticular lipid blossynthesis or control. The method is useful for introducing a nucleic acid into a cell preferably of maize, soybean, crapeseed, cannola, cotton, safflower, peanut, palm or sunflower plant and generating a plant from the plant cell. The transformed plants have improved environmental resistance relating to wind, frost, UV or drought; fungal, bacterial or viral disease resistance: pest resistance; and altered lipid content in seeds. Sequences AAAS7874-A57875 represent leek
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ..

The invention relates to transforming a plant cell with either a nucleic acid encoding a plant cuticular lipid biosynthetic protein, or an acid encoding a plant cuticular lipid sequence targetted to a plant cuticular lipid genes and then generating a plant from the plant cell. The cuticular lipid genes that may be used in the invention are given in the lipid genes that may be used in the invention are given in complex mixture of nonpolar lipids (the cuticular wax). The cuticular of complex mixture of nonpolar lipids (the cuticular wax). The cuticular complex mixture of nonpolar lipids (the cuticular wax). The cuticular lipid genes to receive and strengthens the plants, prevents evaporation of internal conficts the quantity and composition of cuticular lipids; in maize, 17 couticular lipid biosynthesis or control. The method is useful for introducing a nucleic acid into a cell preferably of maize, soybean, capessed, canola, cotton, safilower, peanut, palm or sunflower plant and generating a plant from the plant cell. The transformed plants have improved environmental resistance relating to wind, frost, Wor drought; fungal, bacterial or viral disease resistance; sest resistance; and altered lipid content in seeds. The invention relates to constitutively active, non-endogenous versions of endogenous in the invention of the protein coupled receptors (GFCRs, AAY96643-CC AAY9677 and AAN30773-A30743 and to DNA encoding them (AAA30709-A30743 and AAA30773-A30779). The mutant proteins of the invention contain a mutation in a partion of the protein comprising intracellular loop 3 cc (163) and transcambrane domain 6 (TMB). A non-endogenous amino acid, X, is substituted or an endogenous residue in IC3 at a position 16 amino acids Netermina. Of an endogenous proline in TMG to form a sequence of a substituted and is preferably Lys. When the endogenous residue at this consition is Lys. this residue is replaced by His, Arg or preferably Ala.

The 15 amino acid stretch between the substituted and the Promay be endogenous, non-endogenous, or a mixture of endogenous and non-endogenous. The constitutively active GFCRs are useful for identifying antigonists, adonists and partial agonists for all seasons of the receptors in normal and settings for elucidating the roles of the receptors in normal and consisting all services and partial and is Antagonists for a particular GPCR are useful for the reservice and seasons and the propertion and all services and and an antal agonists for elucidating the roles of the receptors in normal and consisting diseased conditions. Antagonists for a particular GPCR are useful for the reservice and seasons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              present sequence represents CDNA encoding a human wild-type an exemplification of the invention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          treating diseases and disorders associated with that receptor. Because the novel mutan GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous ligands. The present sequence represents CDNA encoding a human wild-type treatments and the compounds without the need for endogenous and the compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     site-directed mutagenesis (SDM) to generate DNA encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Non-endogenous constitutively activated human G protein-coupled receptors, useful for identifying agonists for use as pharmaceutical
                                                                                                        G protein-coupl d receptor: GPCK; constitutively active; intracellular 1.3p 3; transmembrane domain 6; drug screening; agonist; antagomist; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1020 BF; 174 A; 364 C; 261 G; 221 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes isolated nucleic acid sequences which encode lipid metabolism related proteins (LMRP). The LMRP nucleic acids can be used to modify lipids and fatty acids, cofactors and enzymes in microorganisms and plants, particularly to produce polyunsaturated fatty acids, and are especially useful in ollseed plants. The nucleic acids may also confer biotic or abiotic stress tolerance, particularly to cotton, rapeseed, canola, manihot, pepper, sufflower, tagetes, potato, tobacco, eggplant, tomato, vicia species, pea, alfalfa, coffee, cacao, tea, salix species, oll palm, occontu, perennial grasses and forage crops. AAH50078 to AAH50882 tepresent primers used in the exemplification of the present invention. AAH50883 to AAH50868 tepresents LMRP nucleotide sequences, and AAG80841 to AAH50828 represent LMRP protein sequences,
                                                                                                                                                                                                   Moss; physocmitrella patens; lipid metabolism related protein; LMRP; lipid biosynthesis; lipid modification; lipid degradation; cofactor; fatty acid transport; genetic emplinering; fatty acid; enzyme; plant; microorganism; polyunsaturated fatty acid; oilseed plant; maize; wheat; biotic stress tolerance; abiotic stress tolerance; rye; oat; triticale; rice; barley; soybean; peanut; cotton; rapeseed; canolas; manihot; peaper; sunflower; tagetes; potato; tobacco; eggplant; tomato; Vicia; per; alfalfa; coffee; cacao; tea; Salix; oil palm; coconut;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acids encoding lipid metabolism related proteins from physicomitrella patens useful to produce fine chemicals in modified organisms, particularly polyunsaturated fatty acids in oilseed plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bischoff F;
                                                                                                                                                            Phosphatidylinositol synthase partial clone nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

This invention describes a novel method nucleic acid (I) and its encoded polypeptide (II) containing at least one region that encodes an enzymatic activity involved in biosynthesis of spinosyns. (I) are used (I) to identify, inectivate or modulate genes involved in the biosynthesis of identify, incrtivate a library of polyketide synthases; (II) for adding forosamine or trimethylrhamnose to a spinosyn or polyketide adding forosamine or trimethylrhamnose to a spinosyn or polyketide adjunctives, which are used for production of (II), their precursors or derivatives, including production of transgenic plants that express (II) and markers for sequencing of the Saccharopolyspora spinosa genome. (II) are markers for sequencing of the Saccharopolyspora spinosa genome. (II) are spression clones in a gene bank. Cells transformed with (I) may produce expression clones in a gene bank. Cells transformed with (I) may produce (II) at significantly increased levels or produce new derivatives of (II) the control of the secuence of the secuence of the control of the secuence of the control of the secuence of the control of the secuence of the secuenc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid encoding enzymes for spinosyn biosynthesis, useful for recombinant production of insecticidal spinosyns and their derivatives

PCR using two primers (AAQ66174, AAQ66175) was performed to amplify a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         partial sequence of the R20 seven transmentant coding sequence which was later used as a probe for isolating the R20 genomic clone (AAQ66176) from a human placenta DNA library. During the isolation of the R20 gene, two weakly hybridising sequences were identified which had significant homology to other seven transmembrane receptors. The probe was used to screen a human genomic foetal liver DNA library, and while the R20 gene could not be identified in this library, several weakly hybridising clones were plaque purified, subcloned and equenced. The two clones were designated R2 (AAQ66177) and R12. This is the coding sequence of the R12 clone.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Polynucleotide sequences AAC93479 - AAC93527 represent CDNA encoding chiman secreted proteins AAB51827 - AAB51875. Sequences AAB51876 - AAB51875 chiman secreted proteins AAB51827 - AAB51875. Sequences AAB51876 - AAB51875 represent alternative polypeptides encoded by the genes, and amino acid sequences with which they share homology. The genes and camino acid sequences with which they share homology. The genes and camino acid Examples of their activities include immunosuppressive; are expressed. Examples of their activities include immunosuppressive; antiarthritic: antirheumatic; antiproliferative; cytostatic; cardiant; cysotropic; cerebroprotective; nortropic certive; antibacterial; virucide; fungicide; opthalmablogical; and vulnerary. The secreted protectins, preventing and/or diagnosing diseases and disorders such as autoimmune diseases and riminate of infections caused by hacterial architis, hyperproliferative cerebral ischaemia, and jongenesis, nervous system disorders e.g. cerebral ischaemia, anglogenesis, nervous system disorders e.g. Alzheimer's disease.

C. e.g. corneal infection. The polypeptides can also be used to aid wound contained by bacterial viruses and fungi and coular disorders e.g. corneal infection. The polypeptides can also be used to aid wound coulture of prihary tissues, to regenerate tissues and in chemotaxis. The collure of primary tissues, to regenerate tissues and in chemotaxis. The collures of primary tissues, to regenerate fissues and in chemotaxis. The collures of primary interess energy and electrive in preserve the contained and processing the preserve the contained and electroned as a food additive or preserve the contained to be a processing the preserve the contained to be preserved to be a processing the preserved to be preserved to prevent the preserved to prevent preserved to prevent preserved
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present novel sequence represents the human R12 genomic DNA isolated from a human genomic fetal liver DNA library. The invention claims for the full length V28 genomic DNA sequence (AAV18343) isolated from a human placenta genomic library. The V28 (AAV48722) and R12 proteins are seven transmembrane (7TM) receptors which are probably involved in signal transduction. The invention also claims that cells transformed with V28 bNA can be used to produce the recombinant polypeptide, to produce anti-V28 antibodies or in screening assays for V28 agonists or antagonists. The antibodies, agonists and antagonists could then be used to modulate V28 receptor-ligand binding, for e.g. in immunological and/or inflammatory events in vivo.

complementary strand of a polynucleotide which comprises a 5 -end complementary strand of a polynucleotide which comprises a 5 -end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide comprises a 3 'end sequence, where the oligonucleotide which comprises a 3 'end sequence, where the oligonucleotide comprises a 1'end sequence, where the oligonucleotide comprises a 1'end sequence, where the combination of the specification. The primers can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length choks. The primers are also useful for the particularly vill-length choks. The primers are also useful for the cerection and/or diagnosis of the abnormality of the proteins encoded by the full-length choks. The primers allow obtaining of the full-length choks. The primers allow obtaining of the full-length choks acaily without any specialised methods. AAH03646 to AAH13631 copresent human amino acid sequences; and AAH13629 to AAH13632. The present invariant and amino acid sequences; and AAH13629 to AAH13632.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human G-protein thrombin receptor, HIBEB65 - useful to identify (ant)agonists, for treatment of angina. restenosis, wound healing

Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Primer sets for synthesizing polynucleotides, particularly the 5602 full-length to EDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length CDNAs.
                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                      Murine II-1 encoding cDNA was used to isolate the structure of a partial genomic clone of human IL-1. IL-1 has utility in stimulating the immune system, especially for the promotion of wound healing, as a vaccine adjuvant, and in protection against neoplastic disease. IL-1 is also useful in treating critically ill protein-malnourished patients and in diagnostic assay systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Yamamoto J;

These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium coryneform bacterium are useful for producing emino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                               11
                                                                                                                                                                                                                                                                               G. Gaps
                             A cDNA clone (AAT44092) codes for a human 7-transmembrane receptor (AAW07617) putatively identified as a G-protein thrombin receptor. Was discovered in a human infead on the library. G-protein chrombin-like receptor polynucleotides can be used to produce recombinant receptor in host cells (e.g. E. coli, COS-7, Si's), to design probes for detecting diseases releated to receptor gene mutation, and in gene therapy to treat heamophilia or promote wound healing; antisense sequences can be used to treat inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Yokoi H;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides a number of nucleotide and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               amino acid synthesis; vitamin; saccharide;
